of Health**

HHCMART 3 – A Proposal

**The Next Generation Of Care
Management Reporting**

Discussion Topics

- Disclaimer
- Limitations Of Current HHC/MART
- Goals: **CMART Made Simple**
 - 1: Understanding Care Management
 - 2: Simplify Reporting
 - 3: Ready For MAPP HHTS
- Request for **YOUR** feedback

Disclaimer

- This is a big proposal:
 - **Short-term:** Time / Effort to implement a new specification
 - **Long-term:** Simplified specification means fewer data submission errors and cost
 - We want **YOUR** feedback on this proposal, because together we can make it better
 - **PLEASE** share this with your technical staff/consultants!

Limitations Of Existing HHC MART

- You have shared your **frustrations** with the current CMART
 - Phone Calls
 - Periodic Surveys
 - Learning Collaborative
 - Redesignation Breakout Sessions
- **We have been listening!**

Limitations Of Current HHCMART

- Duplication with MAPP HHTS
- Complex data structure
- Many data elements not reported by Health Homes
- Member mismatch between HHTS and CMART
- Only successfully completed interventions are reported
- Elements such as Intensity and Case Reopened are confusing and interpreted differently across the State
- Results cannot be aggregated by CMA

To Infinity And Beyond!

Goal 1: Understanding Care Management

- Three tables:
 - Interventions (14 columns)
 - Assessments (5 columns)
 - Plan Of Care (5 columns)

Goal 1: Understanding Care Management

- Interventions:
 - MBR ID
 - HH MMIS ID
 - CMA MMIS ID
 - Intervention Date
 - Mode
 - Target
 - Completed
 - Goal

Goal 1: Understanding Care Management

- We are asking for **more** intervention-specific data:
 - On a logic model, interventions are how Health Homes are thought to affect member outcomes
 - Key to understanding this relationship is the temporal connection between when health-care events (a trip to the ED) happen and when interventions happen
 - Example: Are members who receive a face-to-face intervention with-in 72 hours of ED utilization less likely to have another ED visit in the following six months than members who do not?

Goal 1: Understanding Care Management

- Assessments:
 - MBR ID
 - HH MMIS ID
 - CMA MMIS ID
 - Completed Date
 - Initial Assessment
- Plan Of Care:
 - MBR ID
 - HH MMIS ID
 - CMA MMIS ID
 - Completed Date
 - Initial Plan

Goal 2: Simplify Reporting

- **Nothing Else!**
 - No more duplication with MAPP HHTS
 - No start dates / end dates
 - Goodbye Access!
- Data submitted for members not in MAPP HHTS: **Rejected**
- Members not reported, will have **zero** interventions, assessments, plans for the measurement period

Goal 3: Ready for MAPP HHTS

- **HHC MART will eventually become part of MAPP HHTS**
- Two Step Implementation:
 - **Step 1:** Implementation of CMART 3 specification; data submitted via the HCS to OQPS
 - **Step 2:** CMART becomes part of MAPP with minimal changes to specification; data submitted to MAPP HHTS

Request For Your Feedback

Next Steps

- Implementation: Q1 / Q2 2017?
- Thank You for your time, feedback and questions
- Nothing presented today is set in stone
